AB Platinum(II) and palladium(II) complexes MCl₂L₂ and the gold(I) complex [AuL₂]Cl of the air-stable ferrocene-derived hydroxymethylphosphine FcCH₂P(CH₂OH)₂ (L) have been synthesized by ligand substitution reactions, and the η⁶-p-cymene ruthenium(II) complex RuCl₂(η⁶-C₁₀H₁₄)L has been synthesized by a chloride bridge-splitting reaction of the dimer [RuCl₂(η⁶-C₁₀H₁₄)]₂. The cationic gold complex has been the subject of a single-crystal x-ray diffraction study, which shows the presence of the expected linearly coordinated bis(phosphine)gold cation, hydrogen-bonded to the chloride counterion and a lattice water mol.
